

TOWARDS 2050

Imagine a future in which the Brinkley Waste and Recycling Facility is a thriving hub of circular innovation, a cornerstone of how we redefine resource recovery for generations to come. Brinkley Circular 2050 charts a bold path towards a fully integrated circular economy and delivers a show piece asset for the community across the Hills, Murraylands and South East.

Brinkley is transforming into a vibrant Green Industrial Precinct with the aim of attracting businesses committed to sustainability and remanufacturing.

FACTS

Our region is growing! A population that is predicted to double by 2050 demands infrastructure which drives job creation, cuts emissions and fosters economic growth.

Reuse generates more jobs than both recycling and landfilling.

Brinkley is zoned for strategic employment, located on a major transport link, and well positioned to support regional areas.

We're not just managing waste; we're crafting a sustainable legacy that everyone can be proud of.

JOIN US ON THE JOURNEY

Let's work together – contact us to explore the opportunities we can unlock through collaboration.

Together, we can shape an inspirational region that champions resilience, innovation, and environmental responsibility.

A BOLD VISION THAT SPANS DECADES, BUILDS A LEGACY AND BEGINS NOW

**BRINKLEY
CIRCULAR
2050**

Brinkley Circular 2050 is a long-term, staged program that balances responsible landfill management with new circular industries.

It will deliver local jobs, environmental benefits, and resilient waste services through strong governance, evidence-based investment, and collaboration with councils, industry, government, and the community.

EYES ON THE HORIZON: DIVERSITY FOR STRENGTH

Responsible landfilling will always play an essential part in waste management, but there's opportunity and demand beyond this. That's where we're going!

A FOCUS ON COMMUNITY

Brinkley Circular 2050 envisions vibrant hubs where community, industry, government, the passionate and the visionary come together to share, repair, and create sustainable solutions.

OUR PATHWAY

Master Planning for Brinkley

A comprehensive master plan will guide development for the next 30–50 years, ensuring space for resource recovery, education facilities, and future landfill cells while responding to population growth and environmental responsibility.

Innovation and Partnerships

Collaborating with councils, industry, and government to deliver cutting-edge solutions such as landfill gas capture, renewable energy generation, and emerging problem waste solutions (think solar panels, batteries and wind turbine blades).

Circular Economy Precinct

Establishing infrastructure to attract businesses in emerging circular sectors including advanced remanufacturing, fibre to fibre technologies and urban mining.

Data Driven Decision Making

We ground our decisions in research, evidence and robust business cases to ensure the best outcomes for our region.

Strategic Investment and Community Benefit

We actively pursue state and federal investment to ease the cost burden on communities and deliver added value through local economic and social benefits.
